

# HUGE SHALLOW OIL PROJECT IN THE EASTERN GREAT BASIN

## POTENTIAL NEW PETROLEUM BASIN

### Status Well Symbols:

- Dry
- Oil Show
- Gas Show
- Geochemical Anomalies

- Sophisticated geochemical surveys have defined targets otherwise undetected by other exploration techniques. Our surveys detected well-defined targets in a significant, widespread basin. We have defined targets ranging in depth from 2500 to 6000 feet which have potentials of hundreds of MMBO.
- Live oil shows were found in prospective reservoirs.
- Anticlines on 2D seismic data have multiple geochemical anomalies indicating extensive microseepage.
- Source rocks and prospective reservoirs may be similar to the prolific oil producing stratigraphic-trap analog.
- Multiple early 1900's shallow dry-water wells less than 1000 feet deep happen to fall on geochemical anomalies.
- Easy surface terrain.
- There are nearby highways and railroads.
- Most of the land is fee-acreage and may be in the \$25 per acre price range.
- We are seeking a partner to fund additional work in preparation for drilling. Partial interests in the project may be available.
- If there is serious interest in participating, please respond and we can supply further information.

### Terms:

- \*Project fee & ORRI to Thomasson Partner Associates, Inc
- \*Drill 3 wells within 2 years
- \*Acquire acreage
- \*Confidentiality and non-compete agreement required prior to a showing here in Denver:
- \*Terms subject to change or withdrawal, and all prospects subject to prior sale without notice

THOMASSON PARTNER  
ASSOCIATES, INC.
